Martin–Duan, Part 2 · M5T1

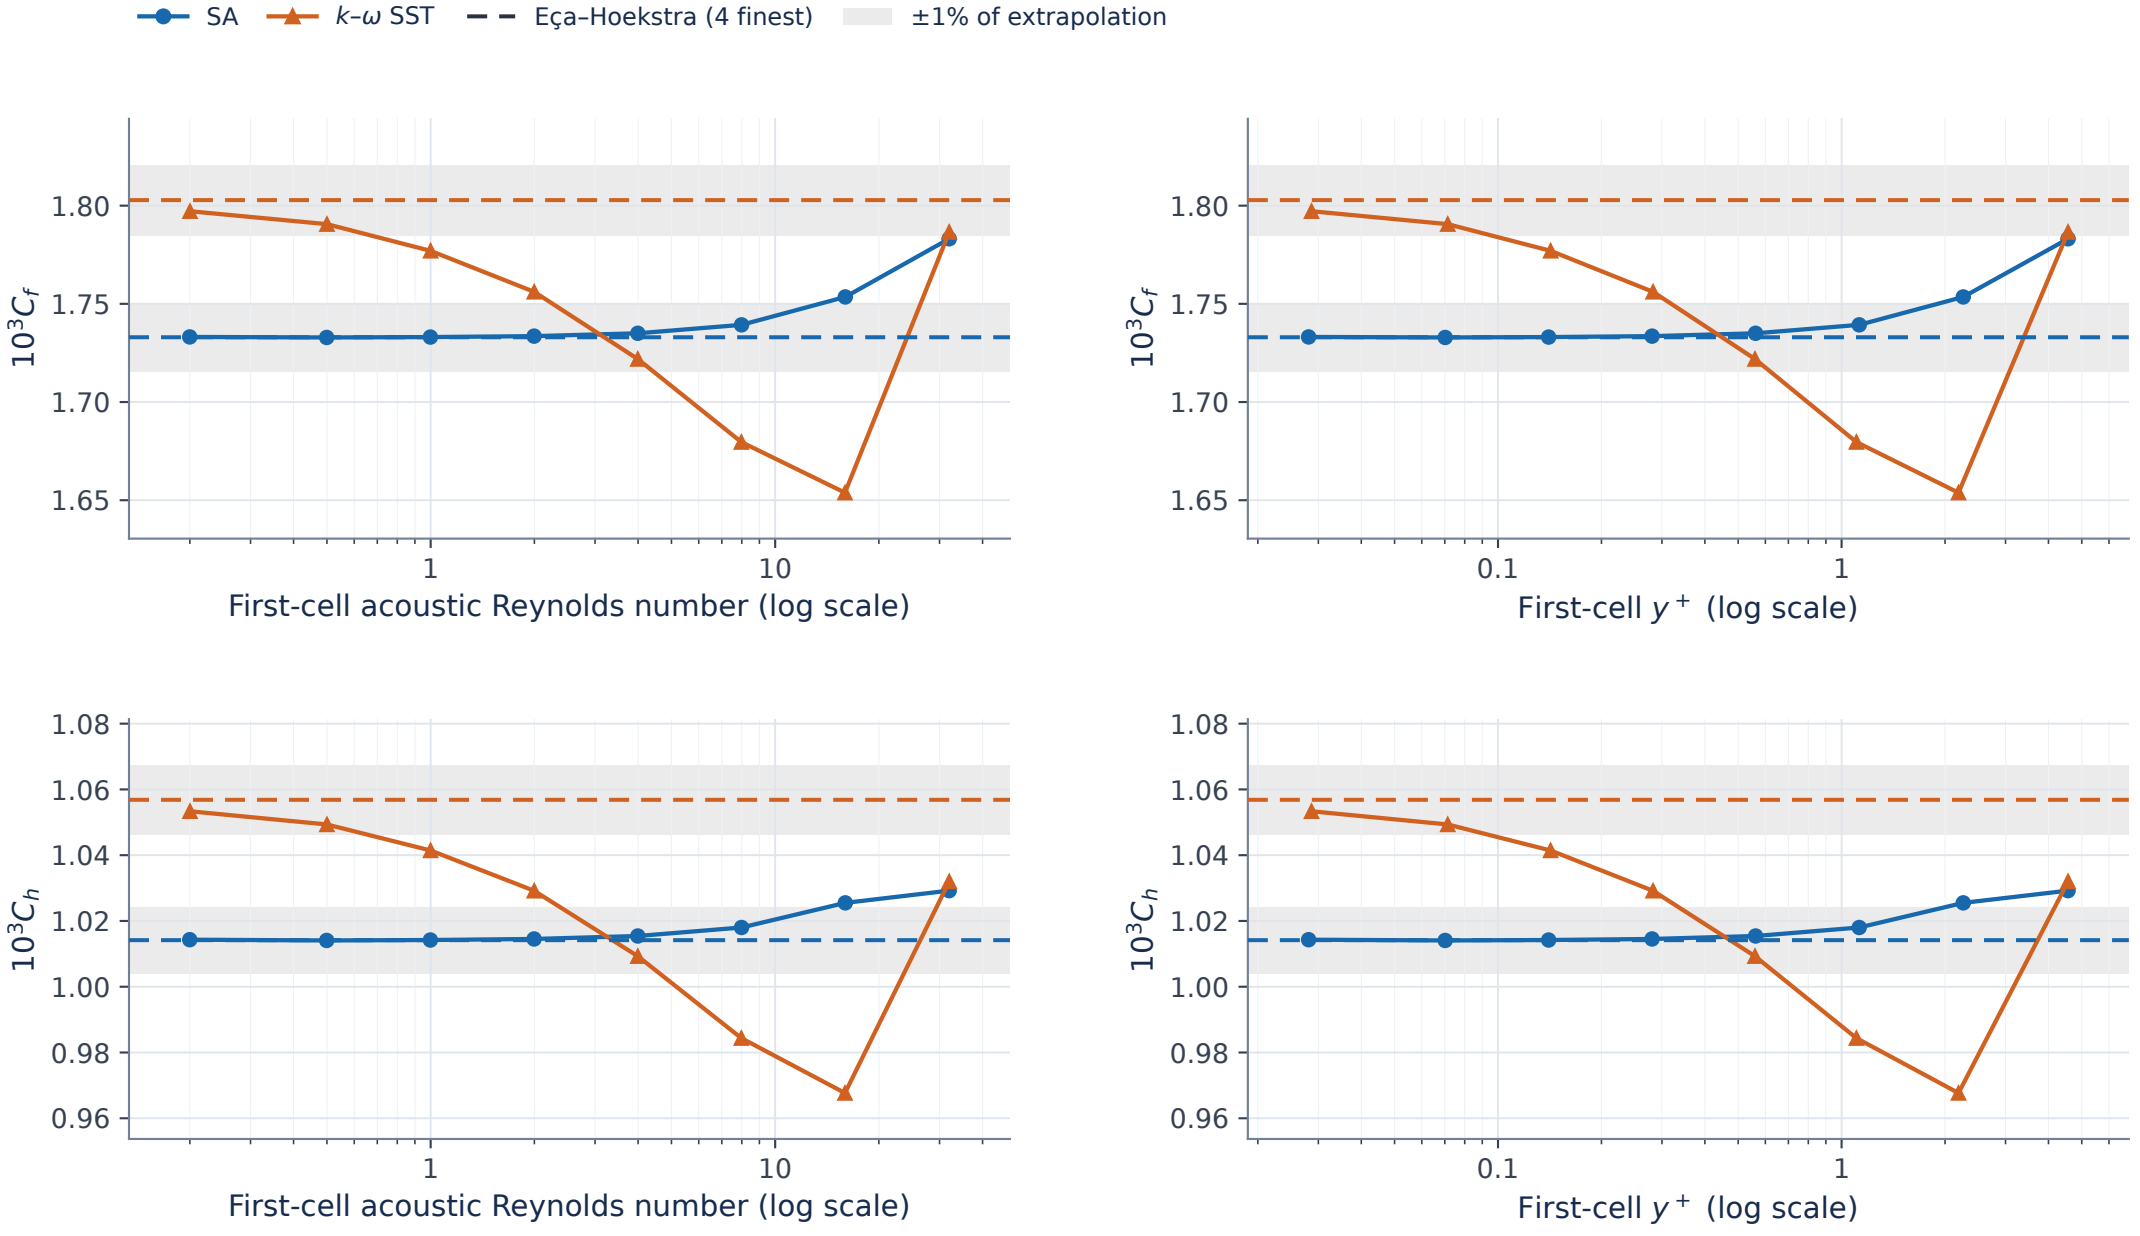

Matched $Re_{\delta_2} = 1538.4$ | 7 SA meshes · 8 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Martin–Duan, Part 2 · M5T2

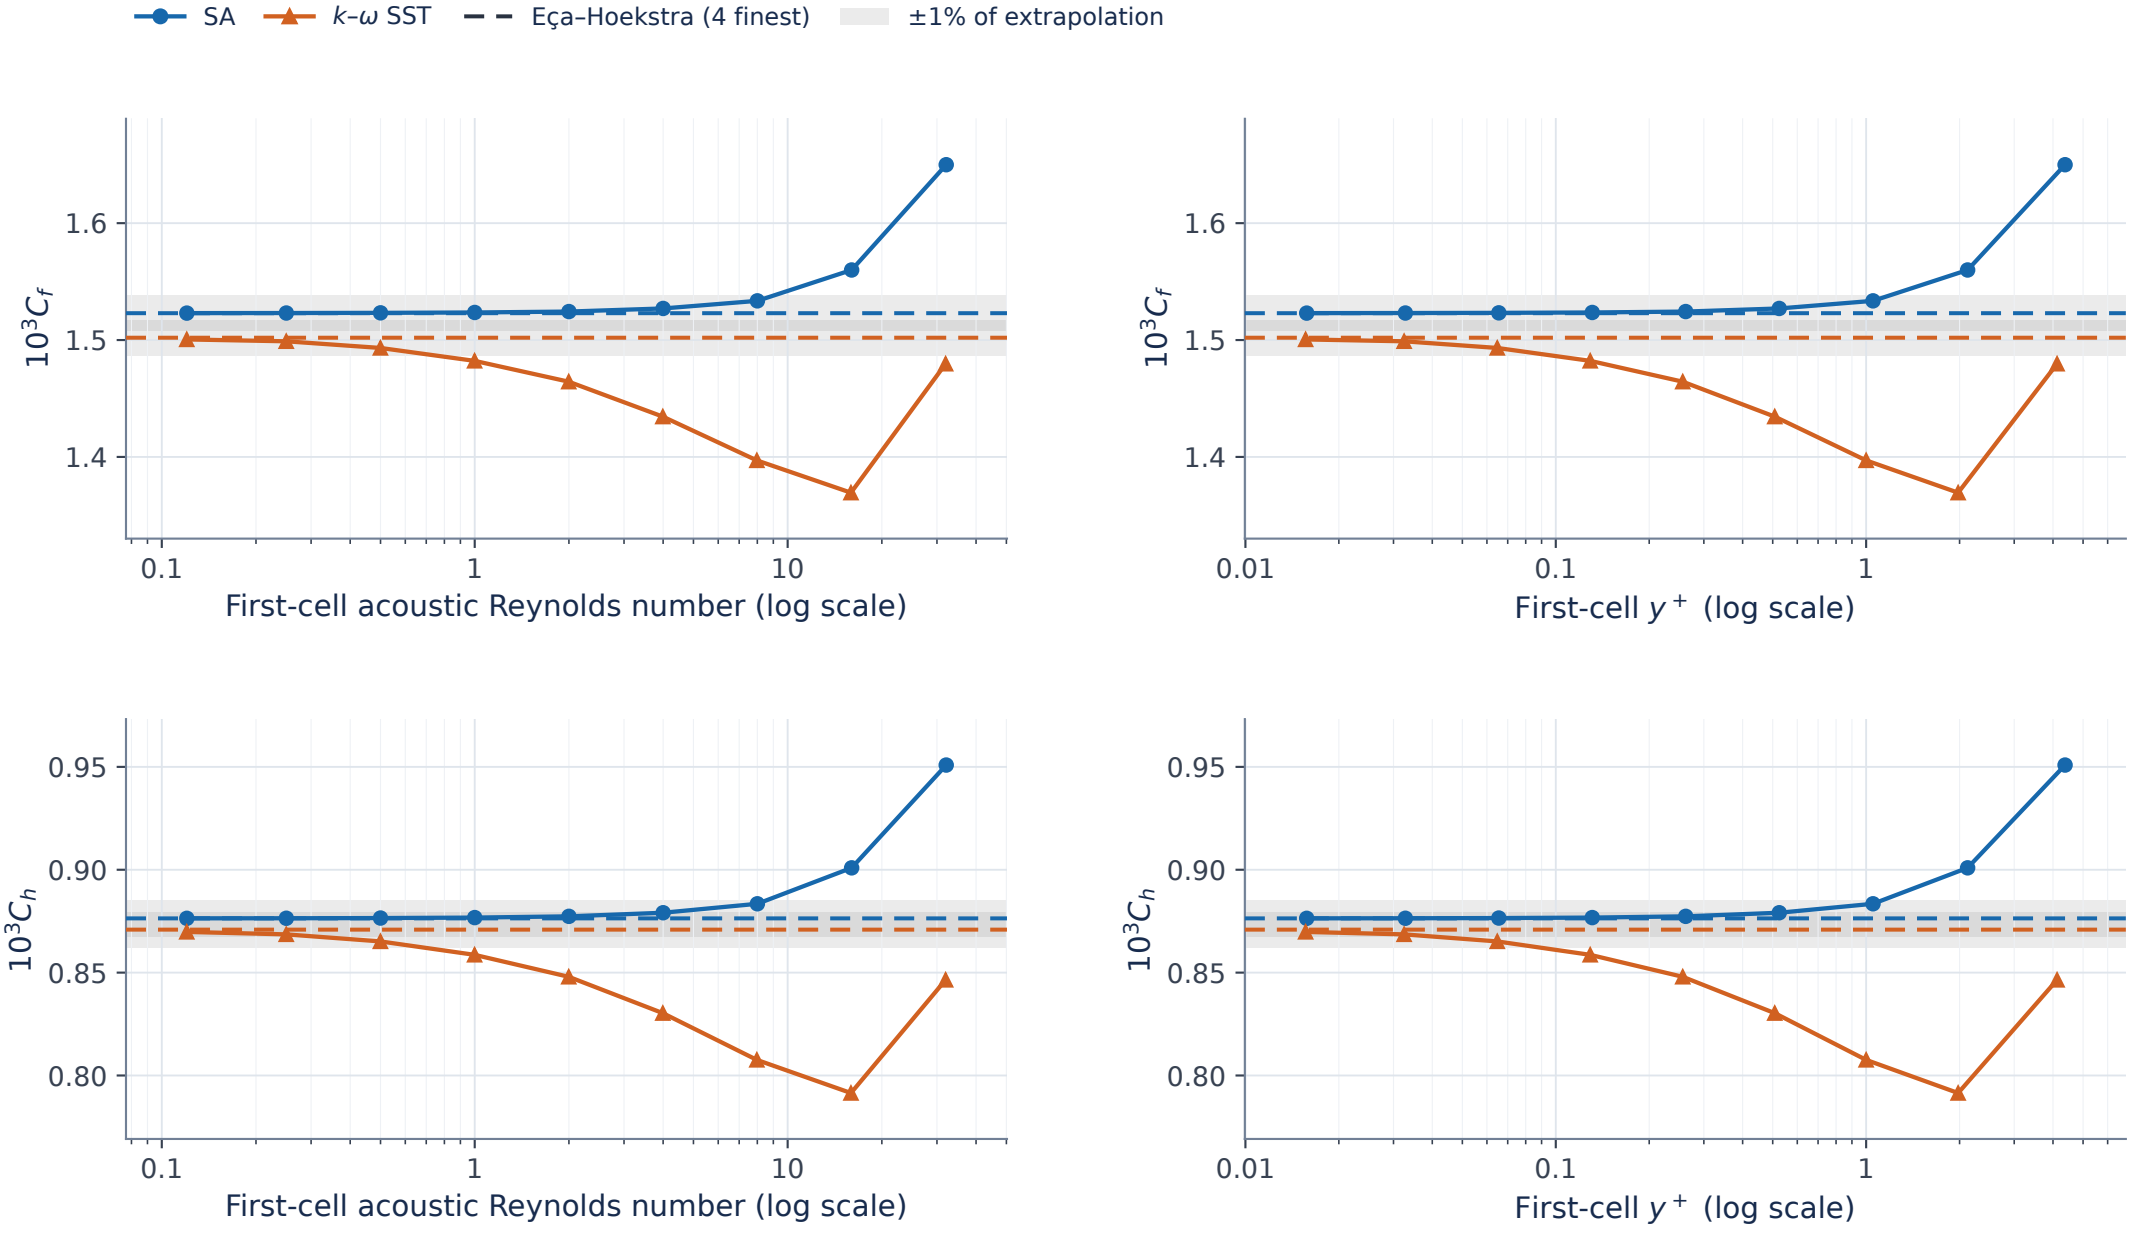

Matched $Re_{\delta_2} = 1521.5$ | 8 SA meshes · 8 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Martin–Duan, Part 2 · M5T3

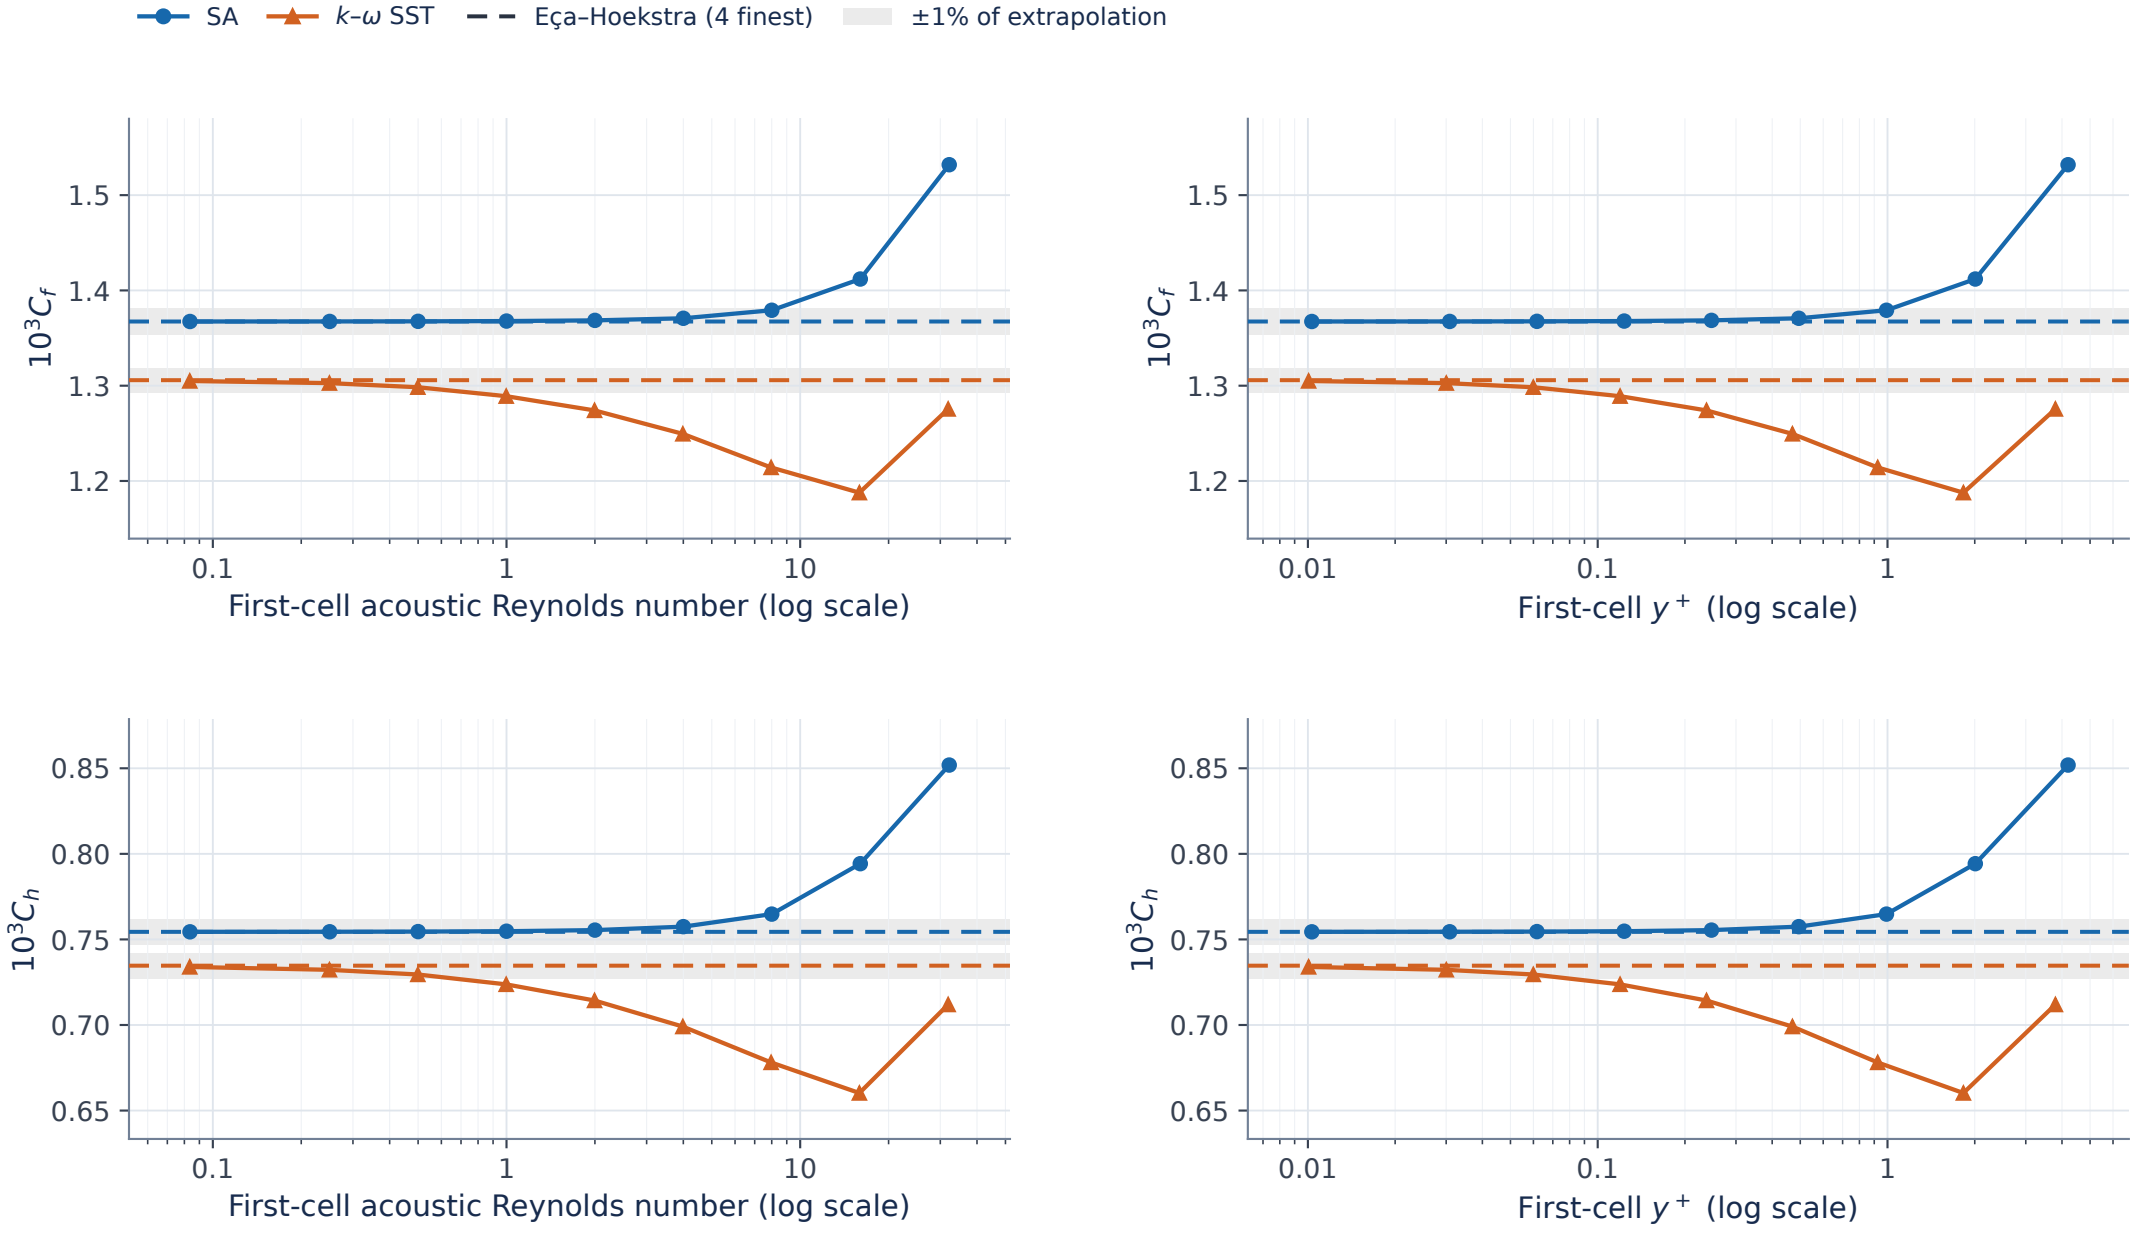

Matched $Re_{\delta_2} = 1524.7$ | 9 SA meshes · 9 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Martin–Duan, Part 2 · M5T4

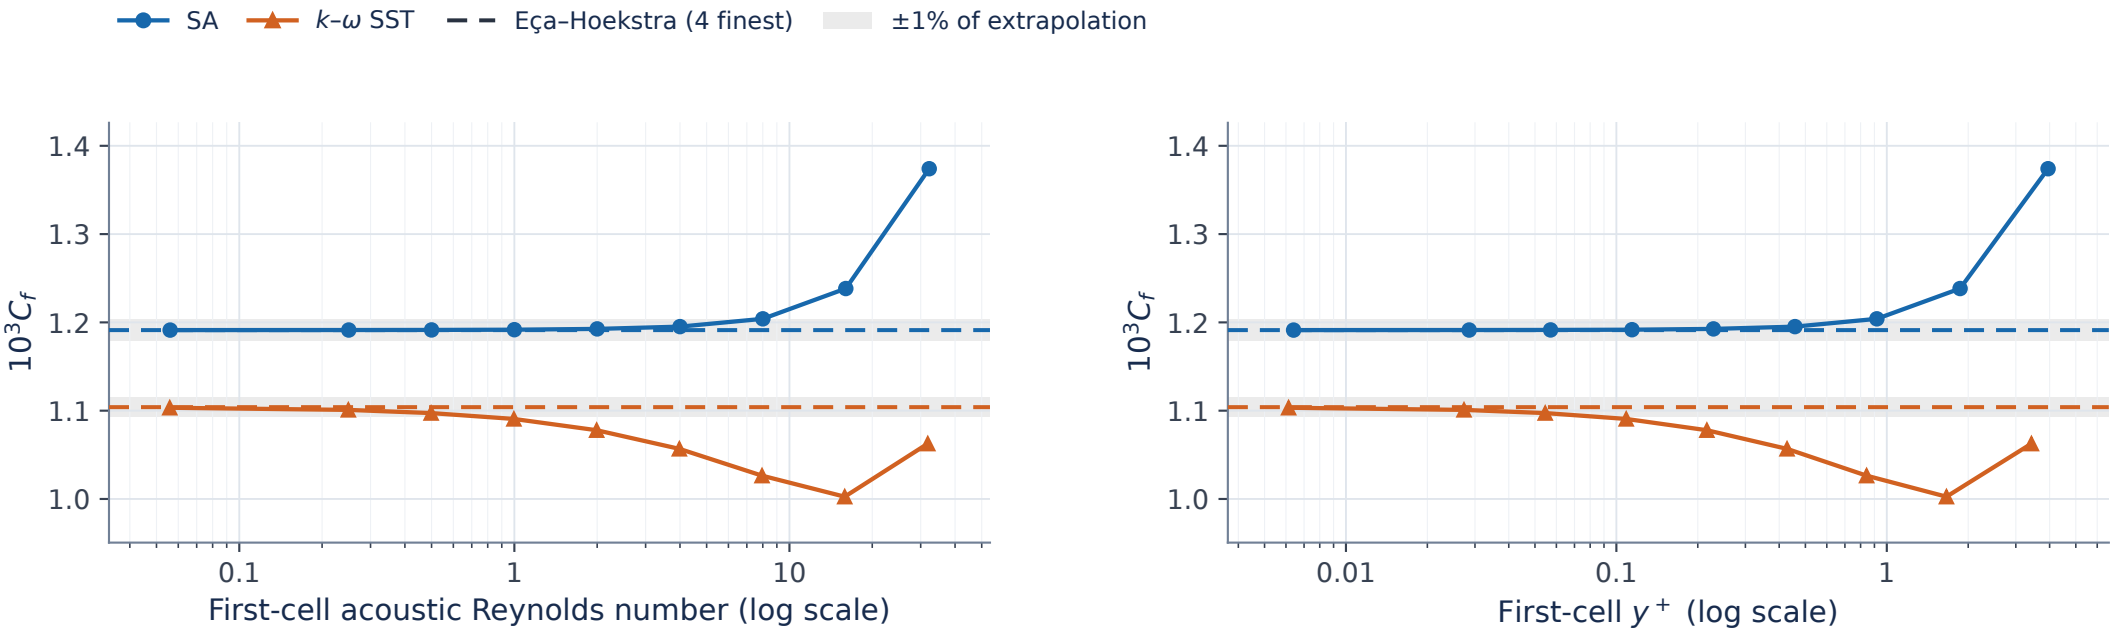

Matched $Re_{\delta_2} = 1526.4$ | 9 SA meshes · 9 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Martin–Duan, Part 2 · M5T5

Matched $Re_{\delta_2} = 1536.8$ | 9 SA meshes · 9 SST meshes · all levels included

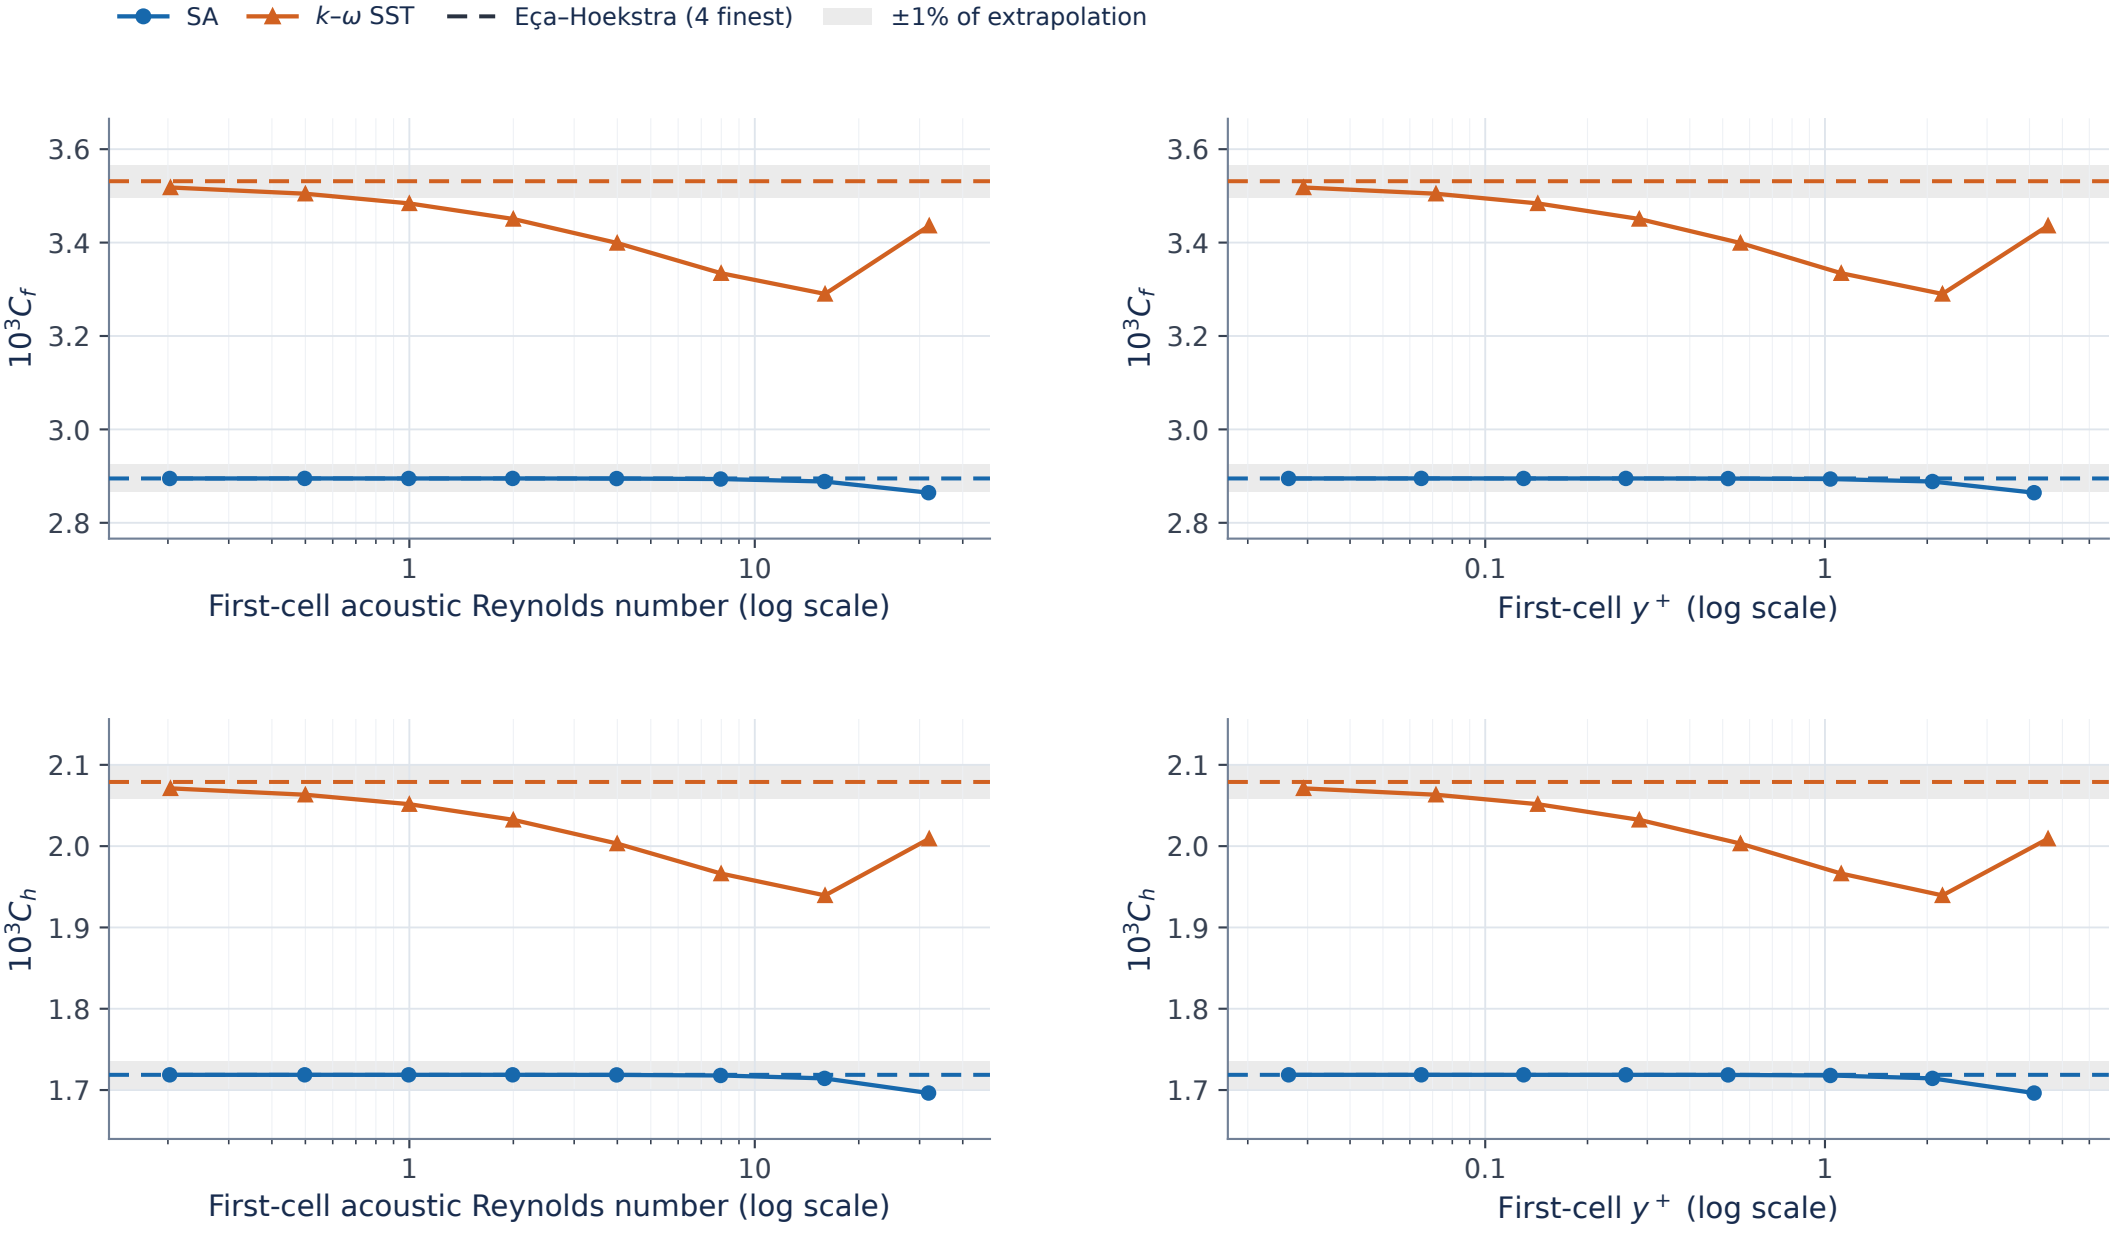

Adiabatic wall
C_h not assessed

Adiabatic wall
C_h not assessed

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Martin–Duan, Part 4 · LowH_M3

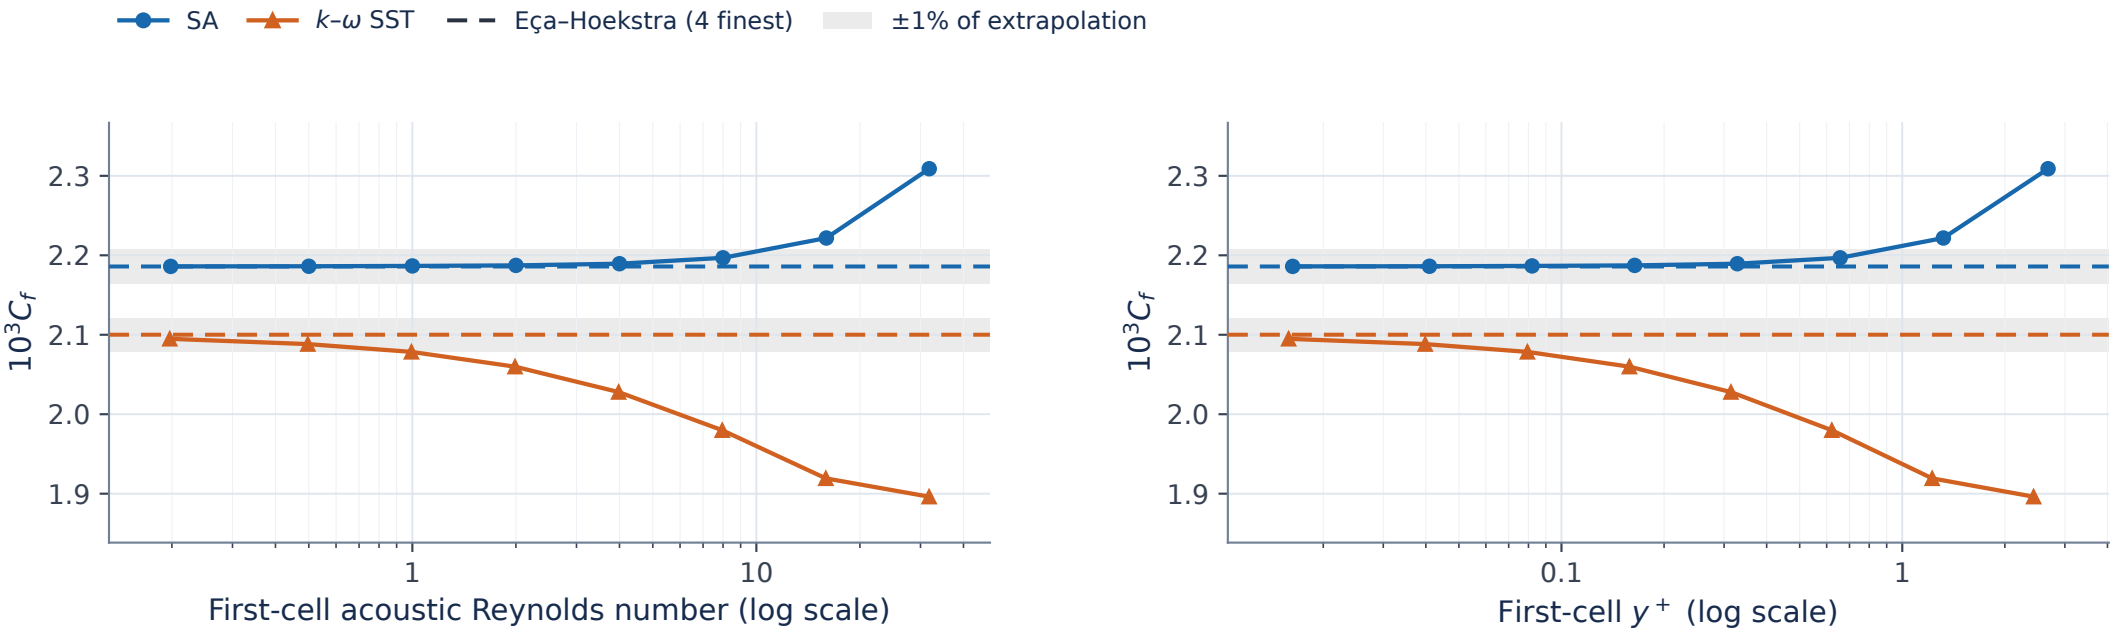

Matched $Re_{\delta_2} = 1554.5$ | 8 SA meshes · 8 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Zhang · M2p5

Matched $Re_{\delta_2} = 1657$ | 8 SA meshes · 8 SST meshes · all levels included

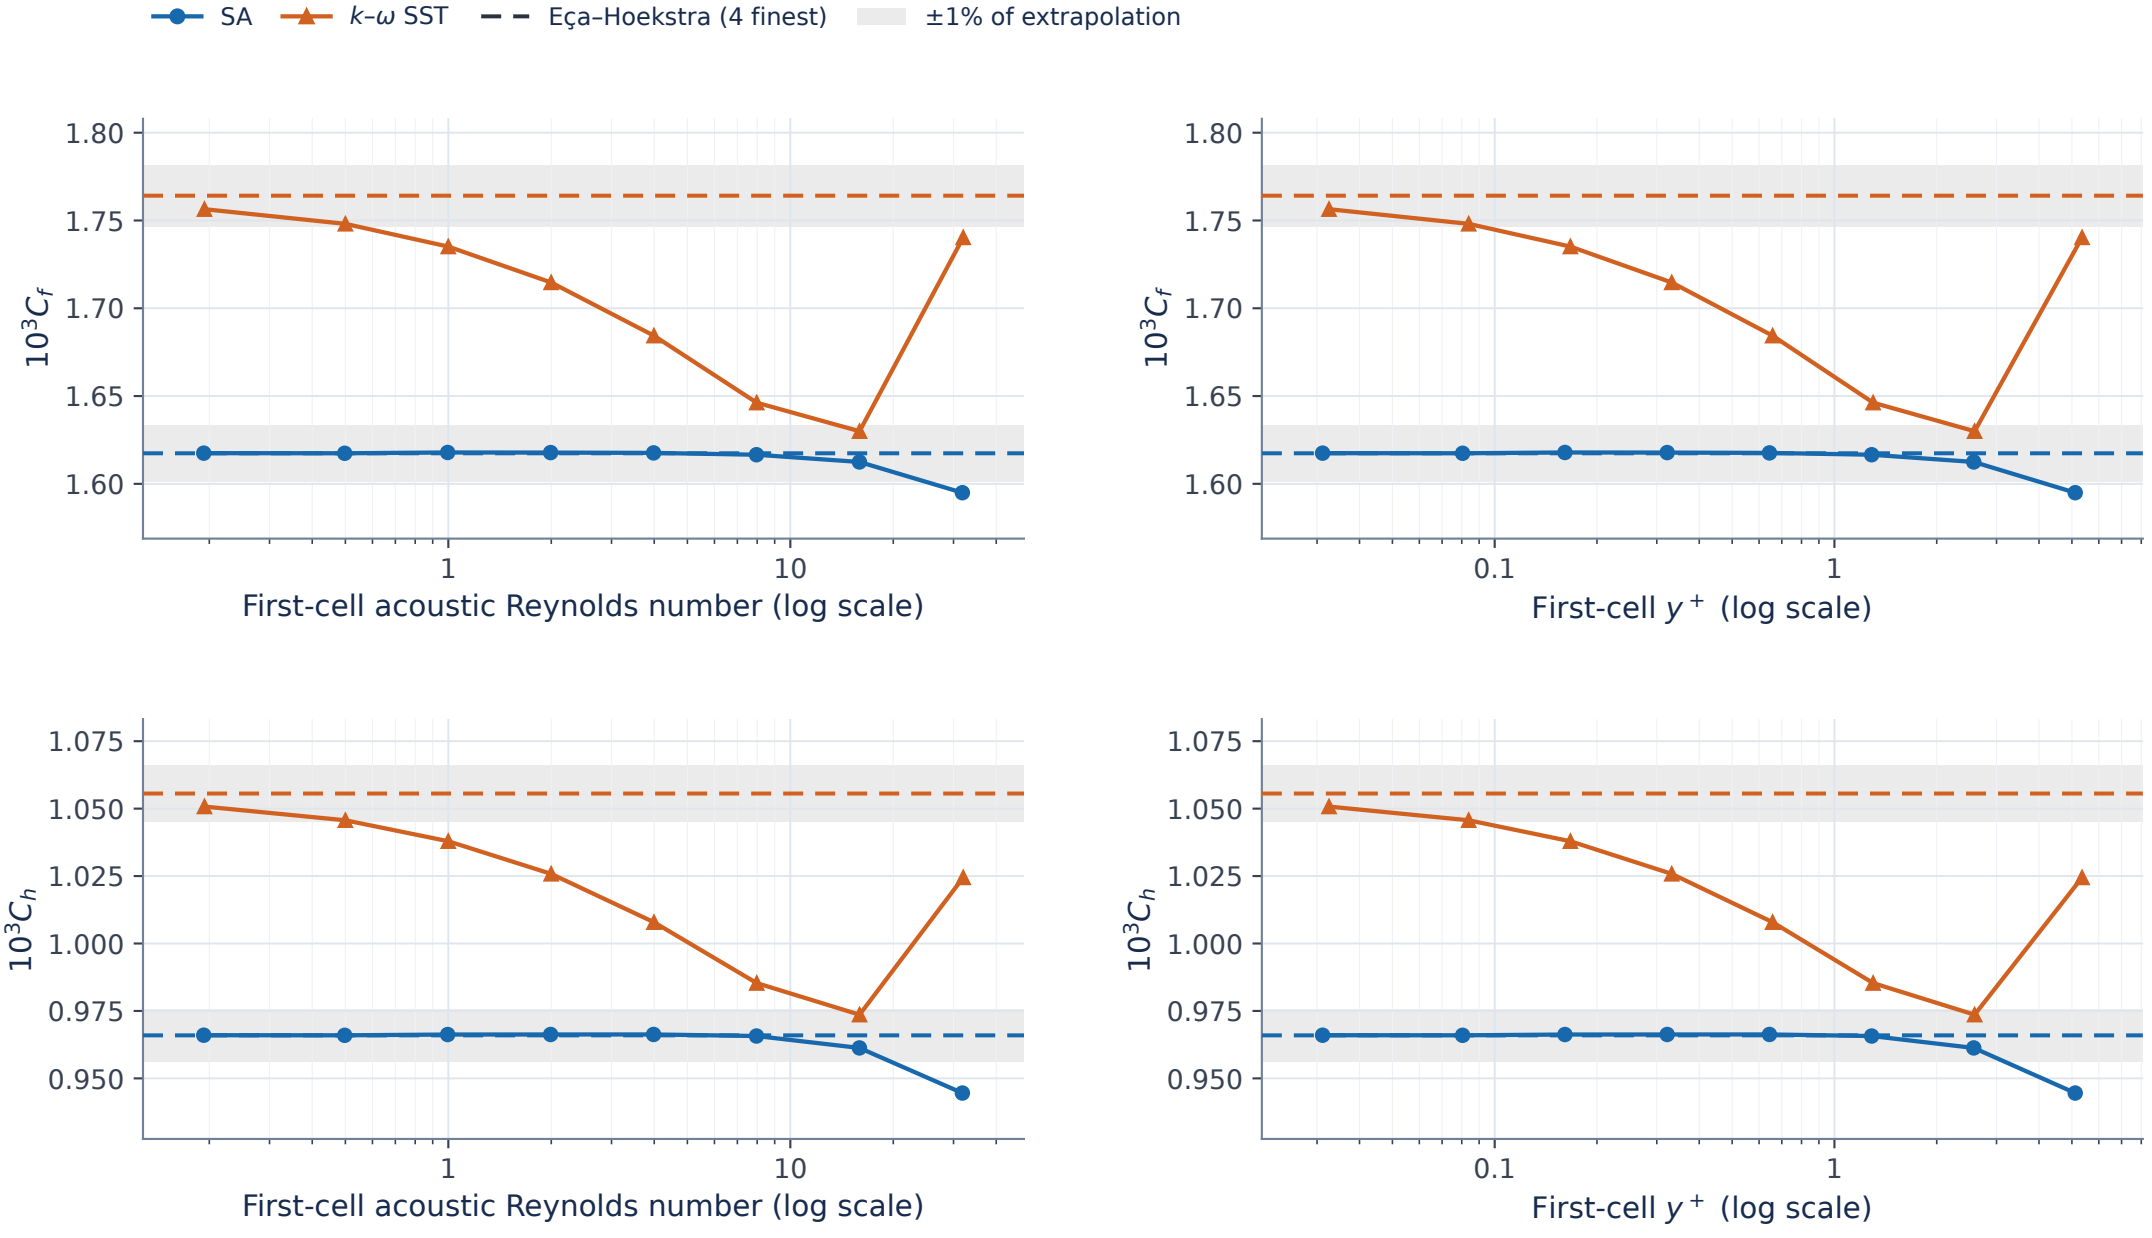

Adiabatic wall
C_h not assessed

Adiabatic wall
C_h not assessed

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Zhang · M6Tw025

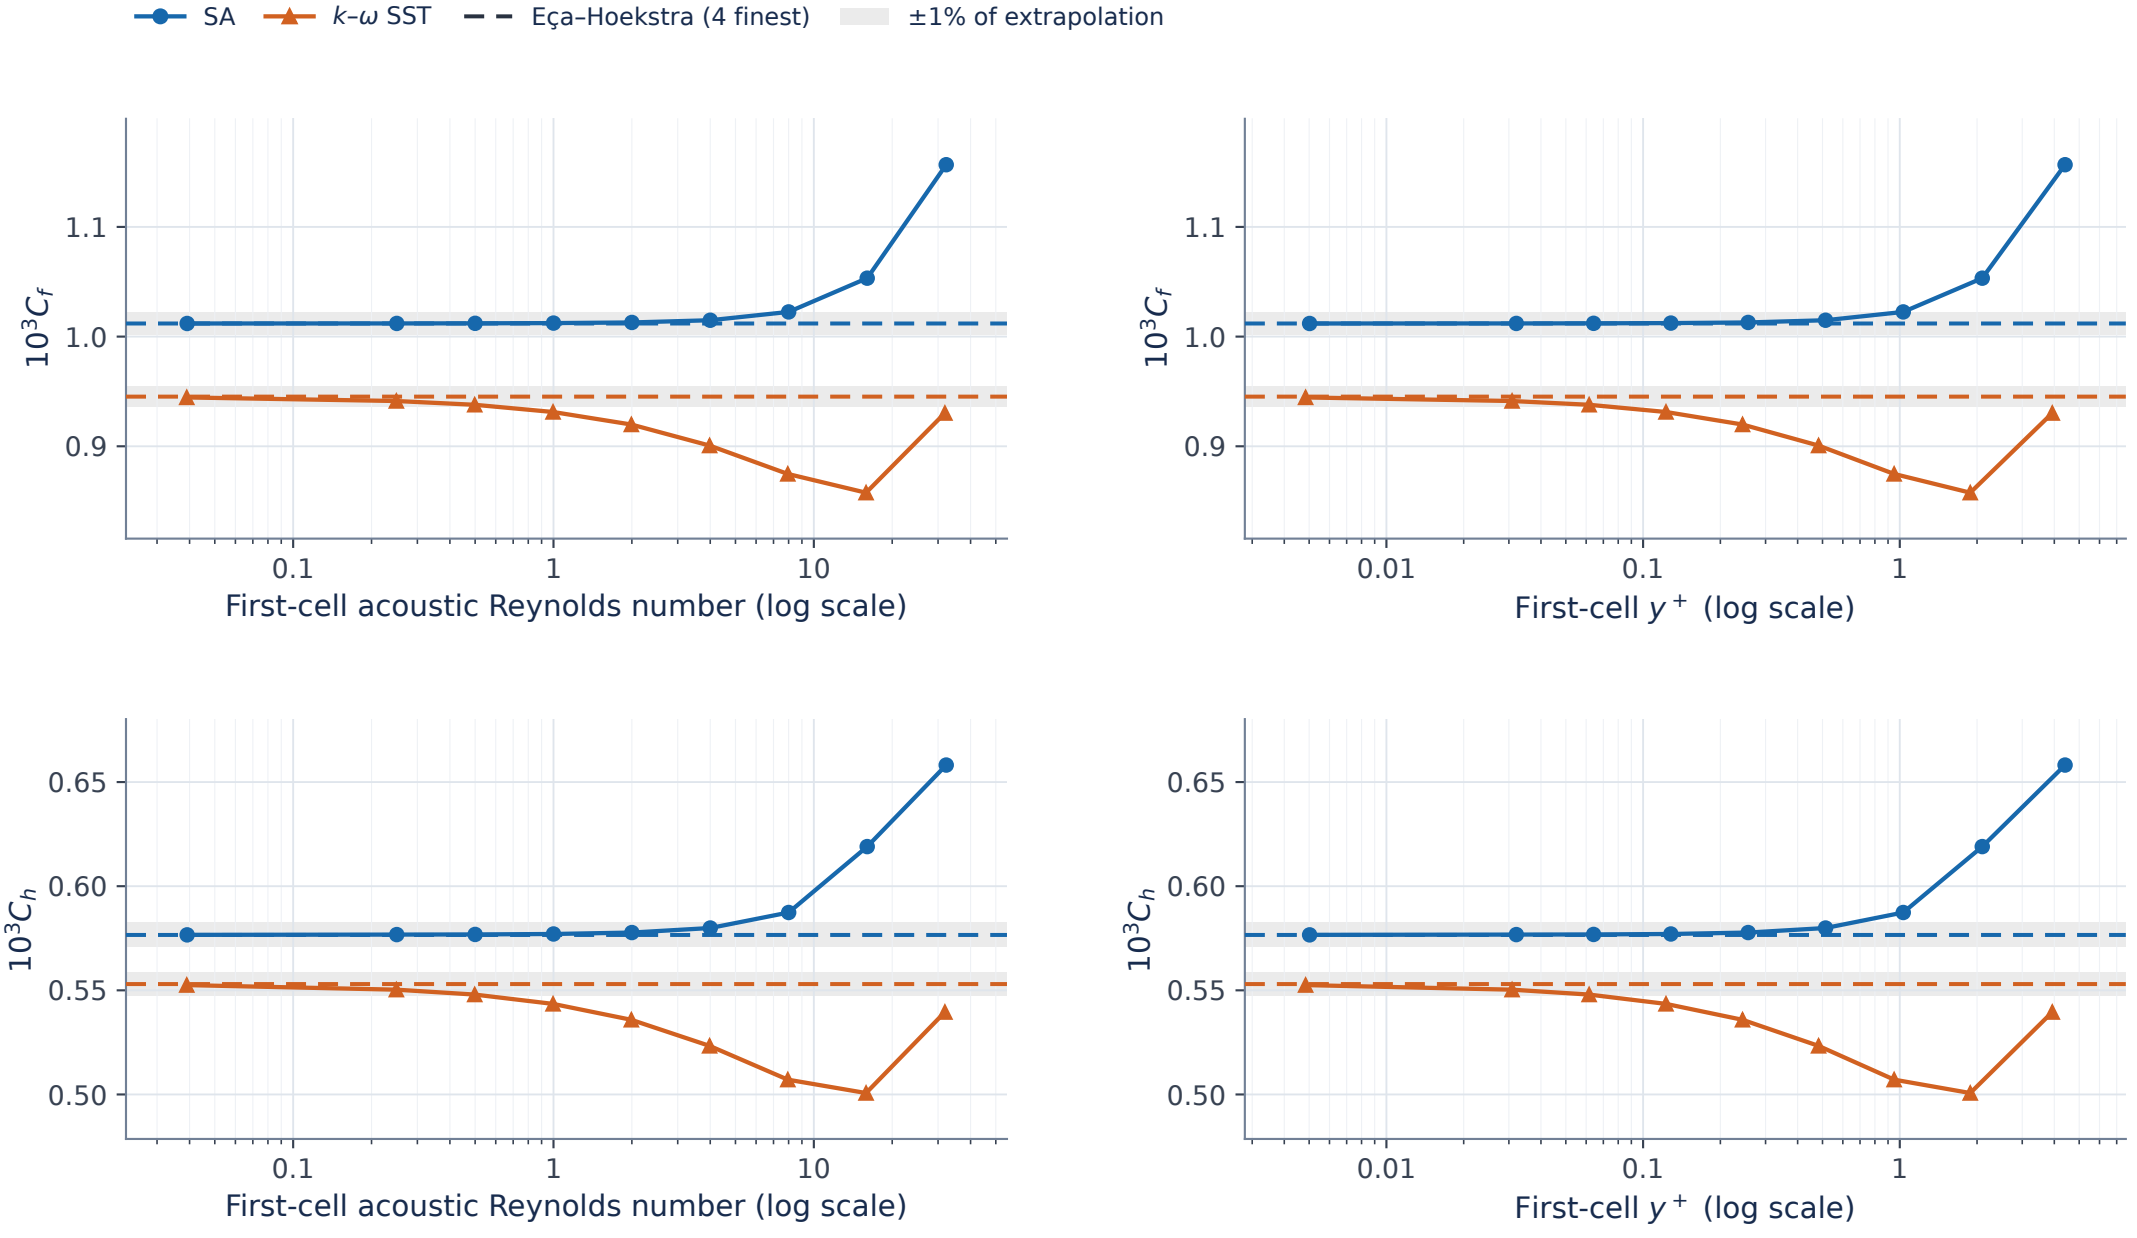

Matched $Re_{\delta_2} = 1135$ | 8 SA meshes · 8 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Zhang · M6Tw076

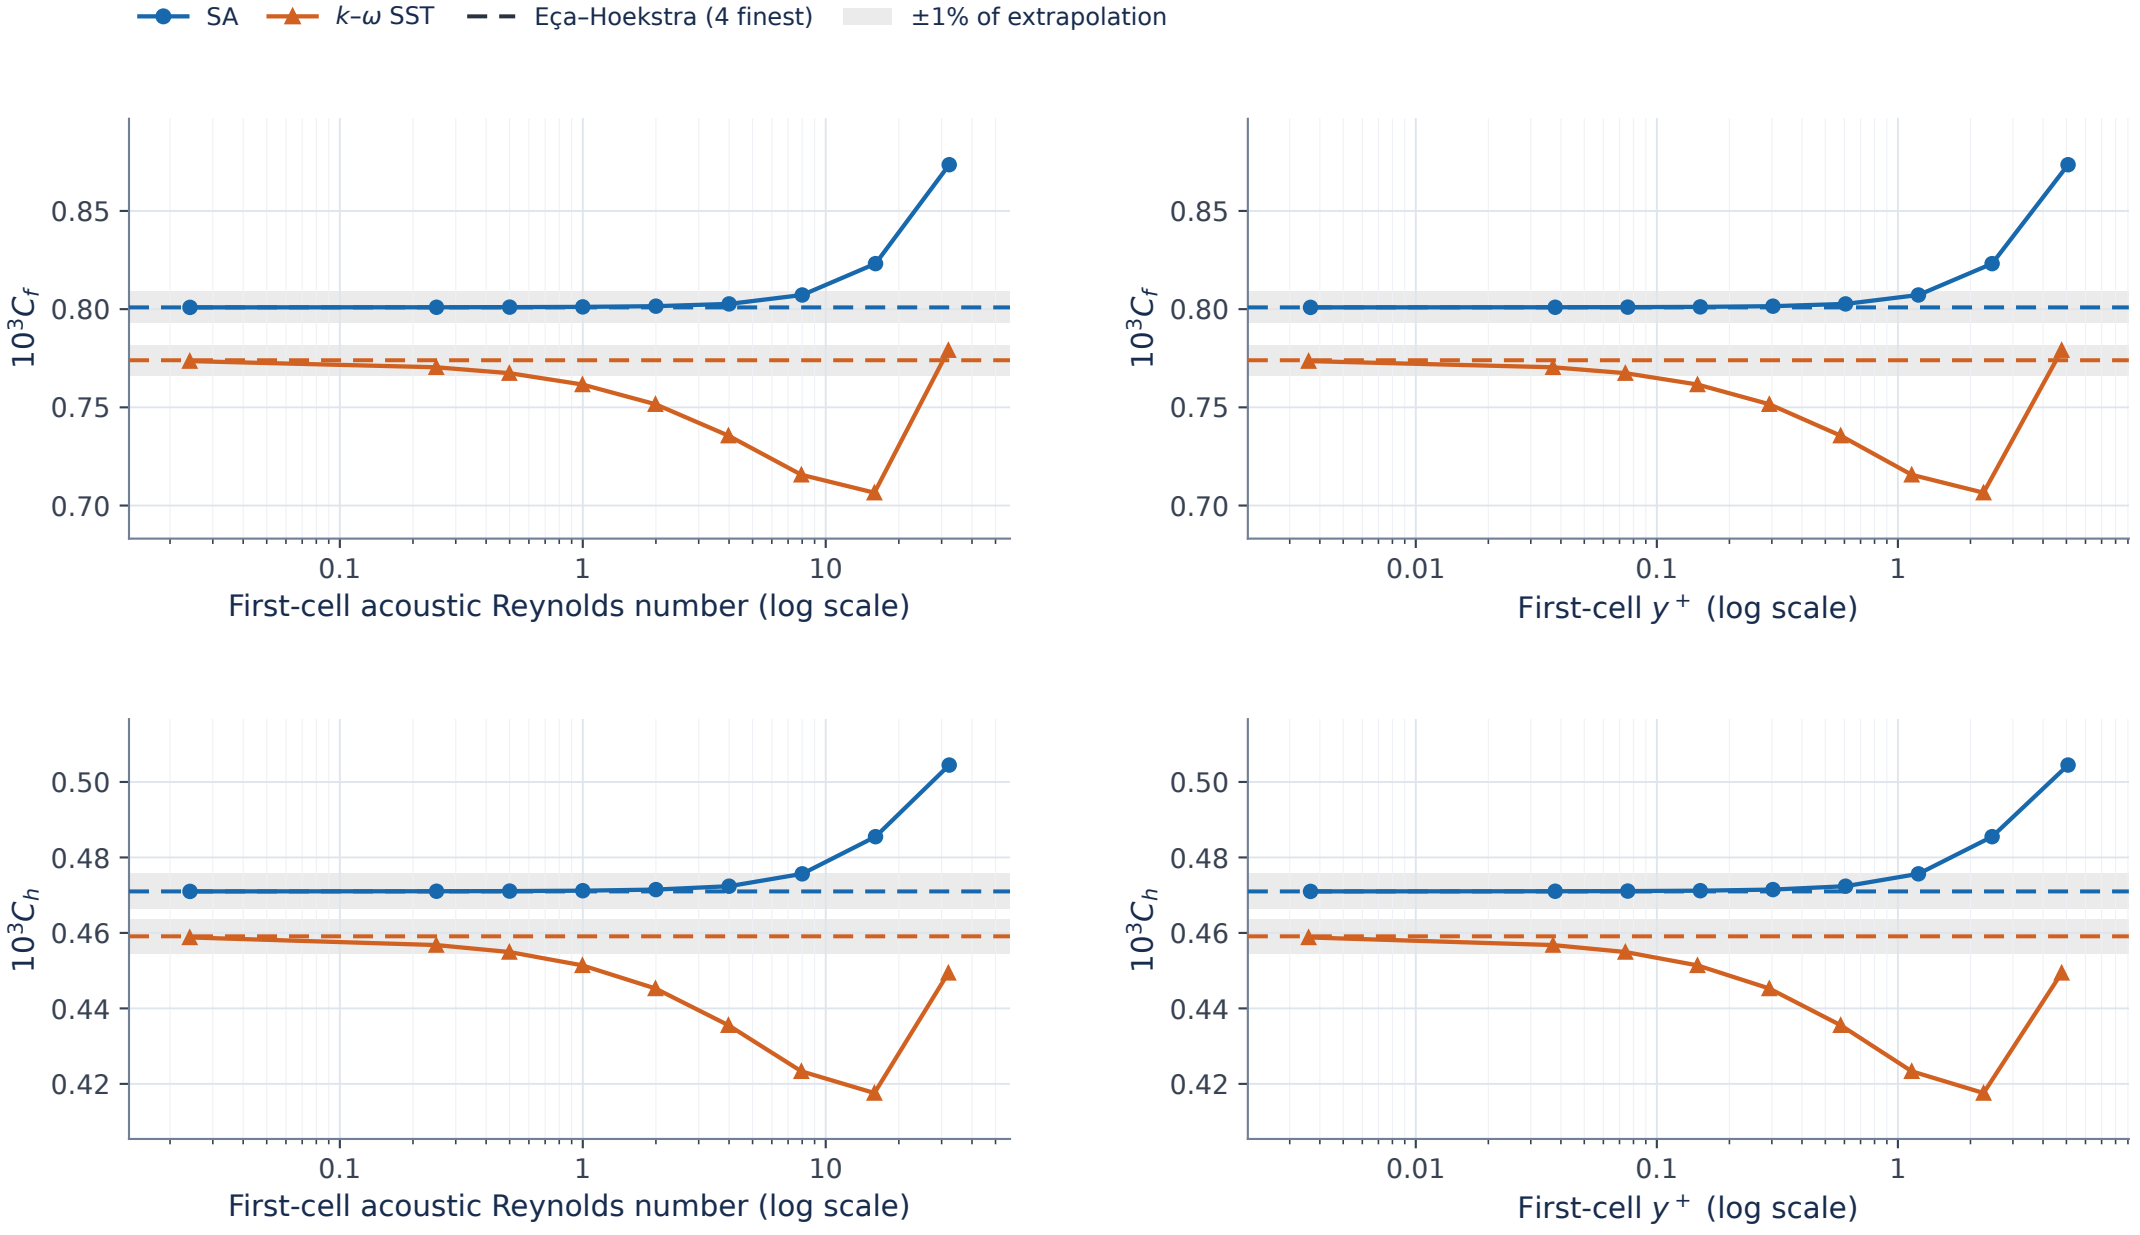

Matched $Re_{\delta_2} = 1746$ | 9 SA meshes · 9 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Zhang · M8Tw048

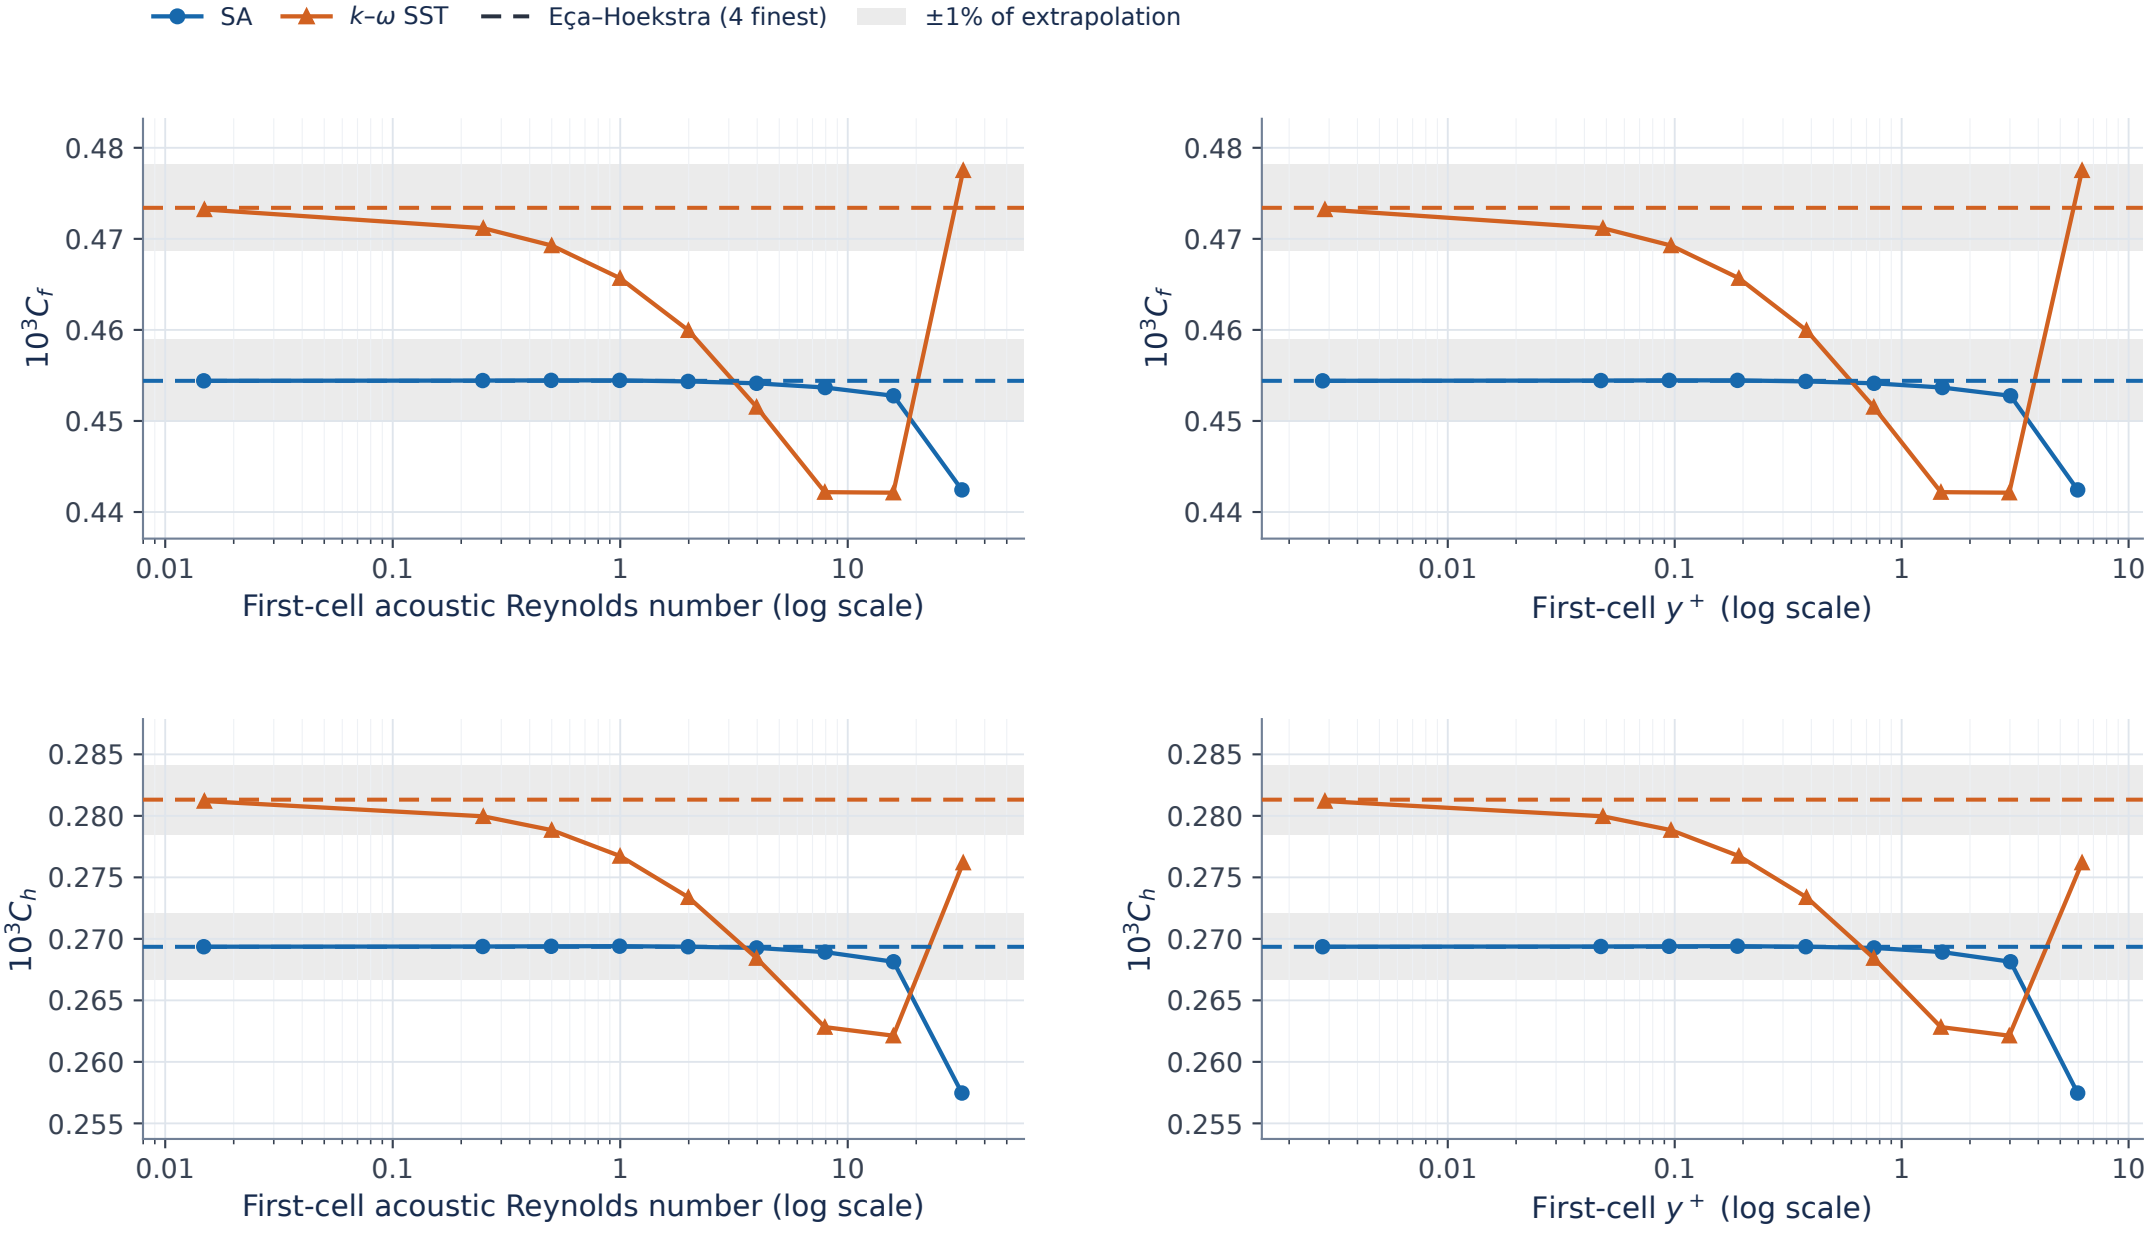

Matched $Re_{\delta_2} = 1990$ | 9 SA meshes · 9 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Zhang · M14Tw018

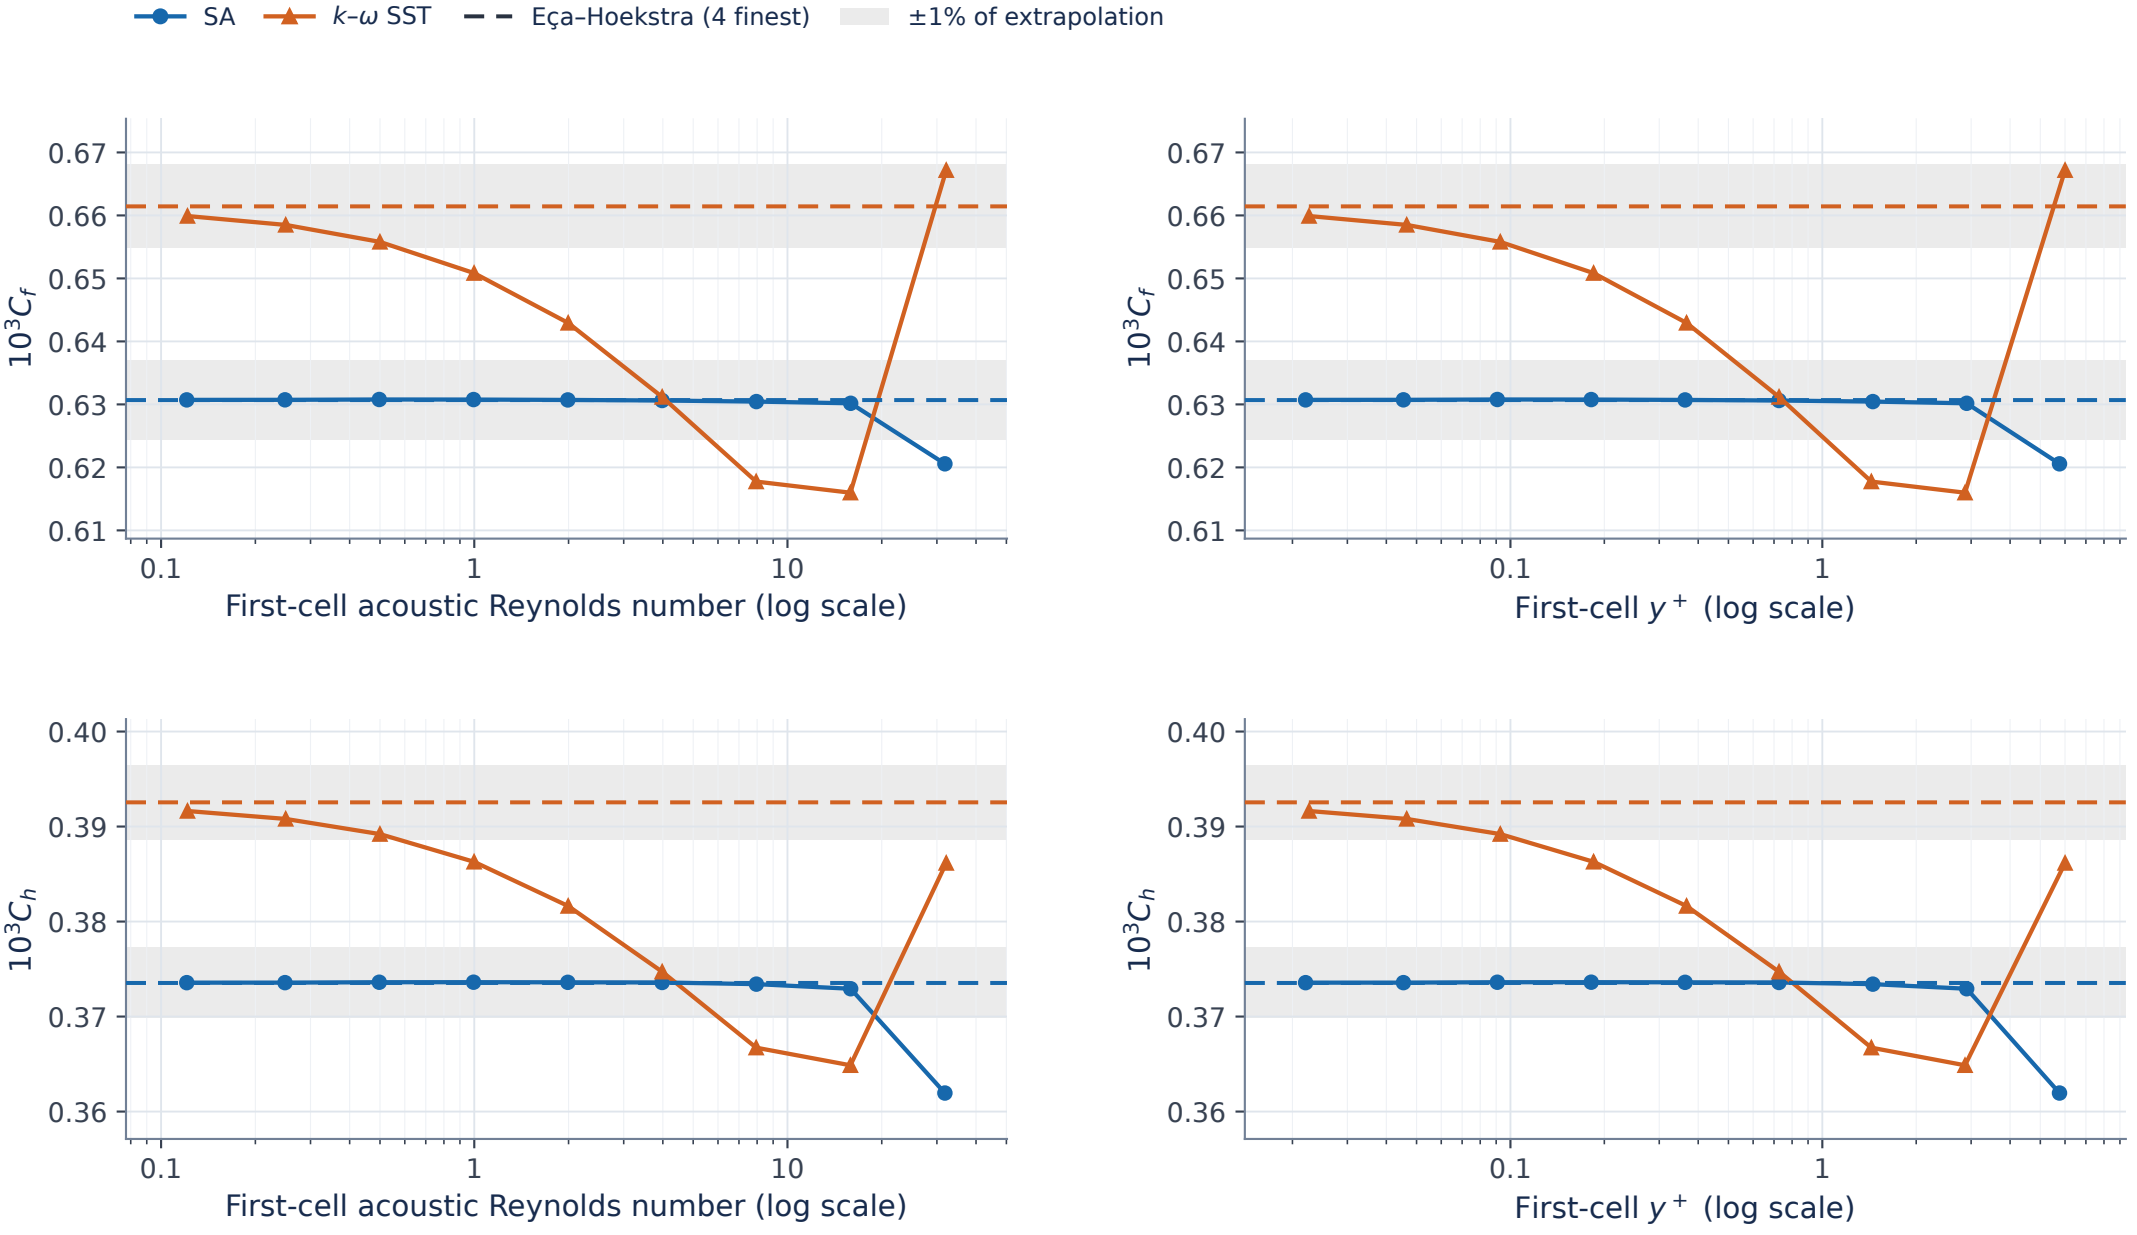

Matched $Re_{\delta_2} = 2354$ | 9 SA meshes · 9 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Huang · M11Tw20 · BL1

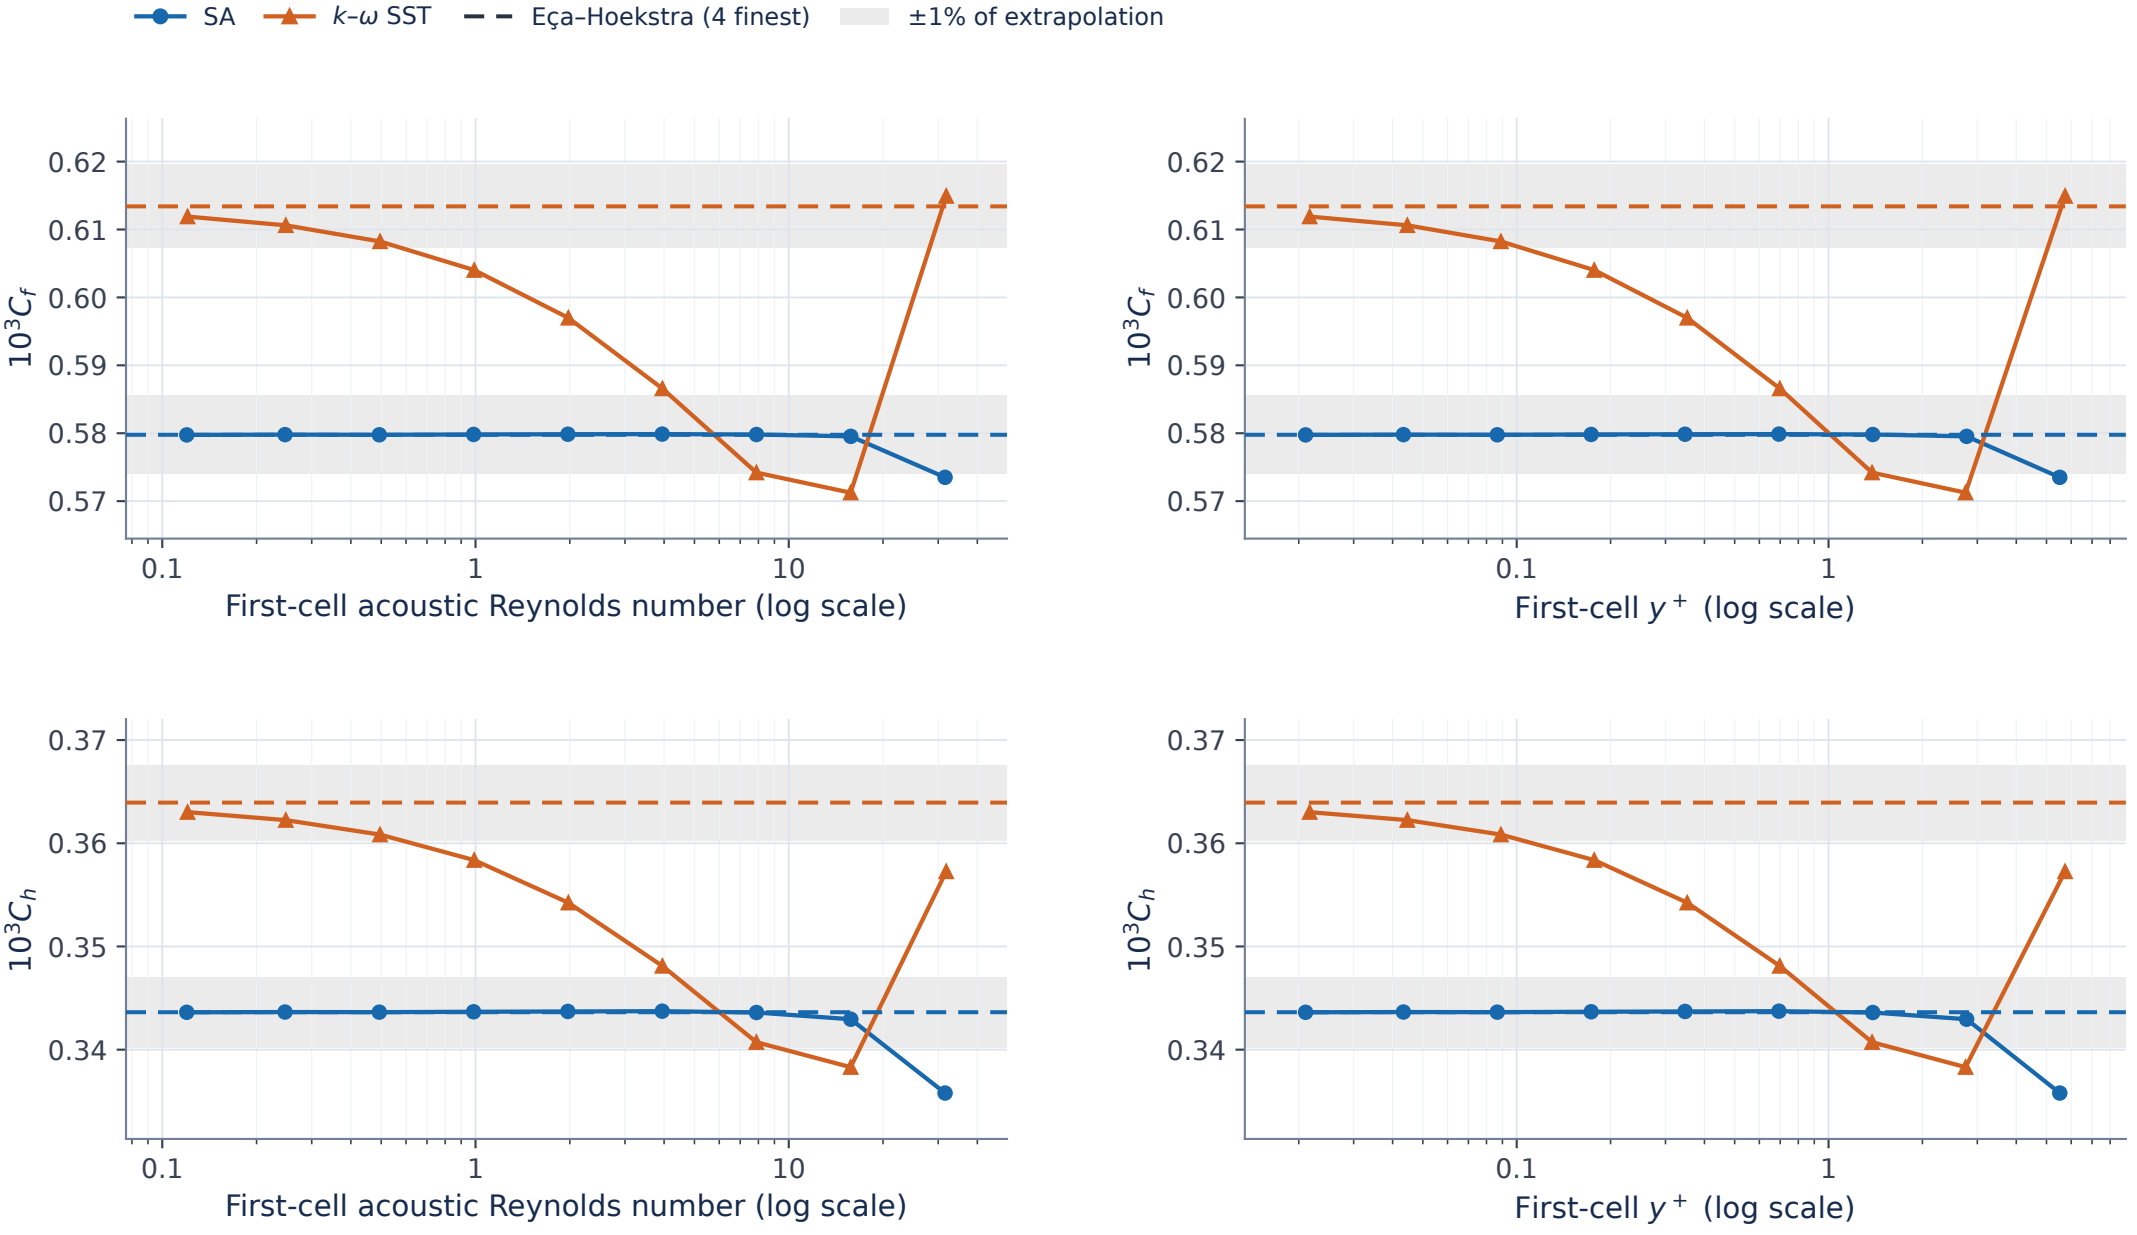

Matched $Re_{\delta_2} = 2204$ | 9 SA meshes · 9 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Huang · M11Tw20 · BL2

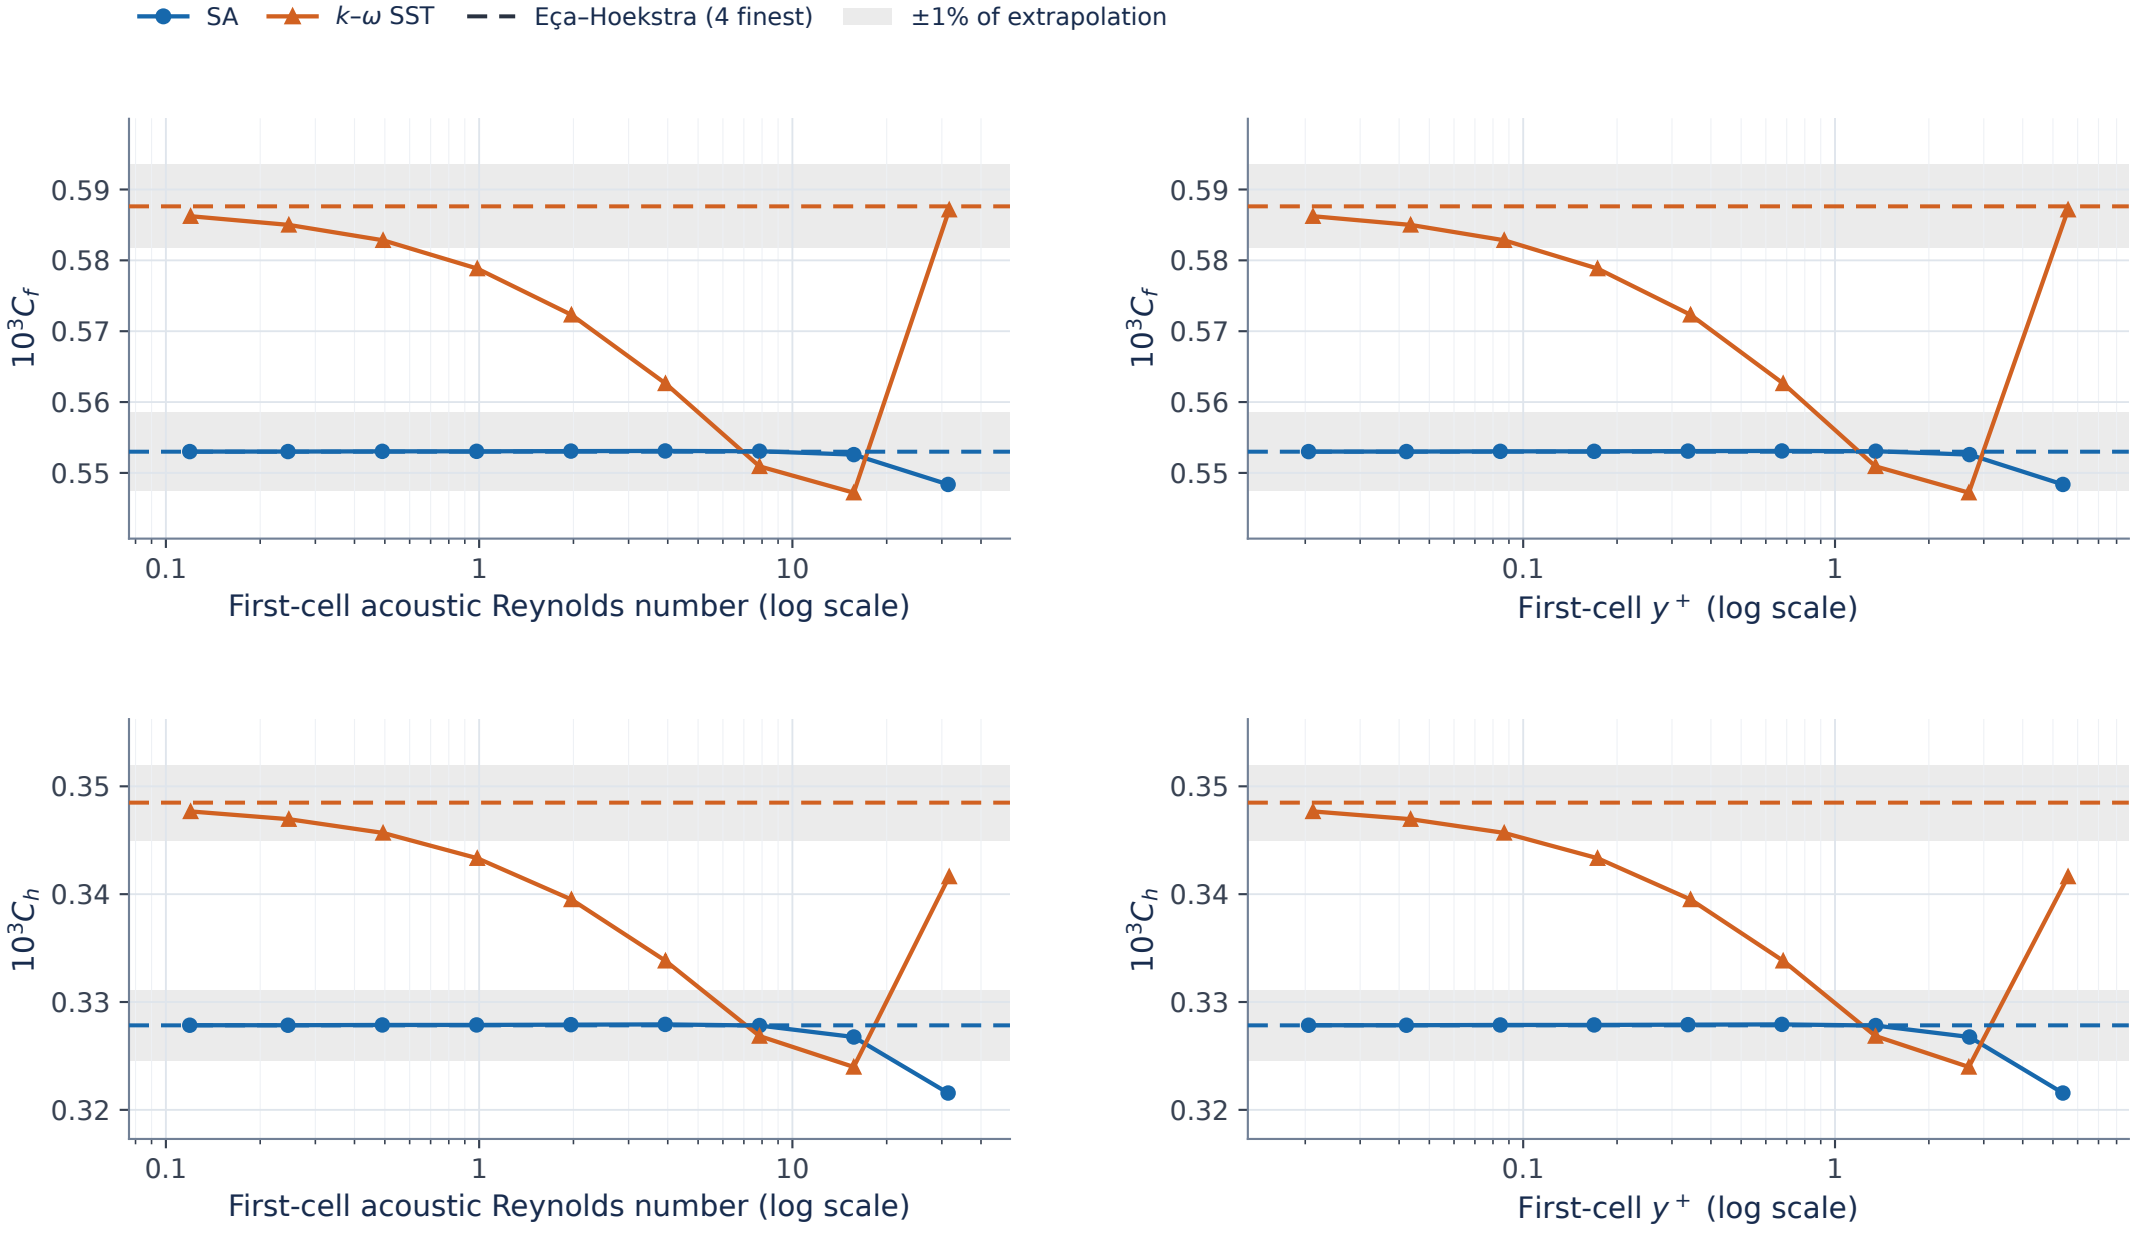

Matched $Re_{\delta_2} = 3419$ | 9 SA meshes · 9 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.

Huang · M11Tw20 · BL3

Matched $Re_{\delta_2} = 4390$ | 9 SA meshes · 9 SST meshes · all levels included

Measured coordinates at each mesh's matching station; firstCellRe definition unchanged.
Dashed lines: Eça–Hoekstra extrapolations from the four finest meshes; grey bands: ±1% of each limit.
Each model and coefficient is fitted separately. Solid lines connect increasing first-cell height.
